

AFFORDABLE 5G

HIGH-TECH AND AFFORDABLE 5G NETWORK
ROLL-OUT TO EVERY CORNER

PRESS RELEASE

November 2022

The end of the road (for now)

This month, the EU-funded project **Affordable5G** reaches the end of its mission to **deliver a complete, disaggregated, and affordable solution covering the needs of private and enterprise 5G networks.**

During its run, the project carried out numerous activities revolving around the envisioned use cases ([emergency communications](#), [smart cities](#) and [manufacturing](#)) and managed to reach out to over **400,000 stakeholders**, through the participation to over **30 different international sector events** and the organisation of 2 events in close collaboration with other H2020 projects operating under the [5G PPP](#) umbrella. All this, despite the challenging restrictions created by the COVID-19 pandemic. The consortium has also strived to contribute its efforts to the international research community – with an output of **over 20 scientific publications** – and standardisation bodies, while laying the groundwork for a future uptake of the solutions explored.

An in-person farewell

After the success of the [last project workshop](#) - conducted with an audience of 100 students at the campus of the National and Kapodistrian University of Athens, Affordable5G had the opportunity to present the developed innovations at the **24th InfoCom World Conference**, in Athens, where partners [8Bells](#) and [inCITES](#) took the stage of the research-oriented workshop, entitled “Research Projects for creating the Future and Innovative Telecoms Market”: **with an in-person audience of around 50 participants**, the event saw Affordable5G offering his take on the challenges for 5G core technologies and Connected Automated Mobility and presenting its investigation to assess facilitation of market adoption.

All that happened along the way

Our story is still online, on [Affordable5G’s website](#), where you can access our [news archive](#) – with reports from events and the market – all project [videos](#), [public deliverables](#), [presentations](#), and our extensive [publications output](#).

Catch up with us, and make sure to follow our [consortium partners](#), to see the path that lies ahead and how they will continue to follow it.
